Applied Wave Research is a leading supplier of high-frequency electronic design Automation (EDA) products for system and circuit level design of wireless telecom equipment, semiconductors, high-speed networking systems and a variety of other electronics-based products. Within the AWR Design Environment the APLAC technology is fully integrated. APLAC's RF design technology has been used in designing over 30 percent of all mobile phone RF ICs worldwide.

The company has a strong research focused strategy and recently added Technologies like Automatic Circuit Based Extraction (ACE) and Axiem 3D planar solver technology. AWR today has over 700 companies deploying its software worldwide, including virtually every major high frequency electronic component and system supplier.
