

Stand 7 Syntronic AB

Syntronic offers qualified and complete development in embedded as well as open systems. We are working with product development for demanding branches, primarily telecom, automotive, medtech/biotech, defence and industry. We are capable of seeing the entire picture and have deep and solid knowledge in electronics, electromechanics and software, with RF/wireless applications as an area of expertise.

By constantly striving after short fast flow of information, flexibility and simple Solutions we will achieve high quality and effectiveness. Our way of working ensures our customers higher product quality, lower costs and higher revenues.

Regardless of if we integrate an existing product or if we develop a customer specific solution we can offer very cost effective solutions. We have development labs and verification labs of world class and we can also offer you a knowledge of most of the famous platforms and tools put on the market today.

A well implemented system development project keeps the time frame and work without performance or operation disruptions. High usability, flexibility and a simple maintenance are achieved. Our customers are supported with either entire project commitments or extra resource in form of specialists in analysis, design, project management, development and implementation. Entire project commitments can include everything from requirement specification to system delivery and implementation. We can manage production and after sales as well.

Syntronic is an independent consulting firm helping you finding the optimal solution.

We know the technique, development environments and how to manage these projects in a controlled manner focusing on budget, time, function and quality.
