

Stand 8 Ansoft

Ansoft LLC is a wholly owned subsidiary of ANSYS, Inc., one of the world's leading engineering simulation software providers. The Company's focus is to offer a common platform of fully integrated multiphysics software tools designed to optimize product development processes for a wide range of industries, including aerospace, automotive, civil engineering, consumer products, chemical process, electronics, environmental, healthcare, marine, power, sports and others. Applied to design concept, finalstage testing, validation and trouble-shooting existing designs, software from ANSYS can significantly speed design and development times, reduce costs, and provide insight and understanding into product and process performance.

ANSYS software not only delivers efficiency, it drives innovation. The technology's ability to go beyond physical constraints and perform simulated tests that would otherwise not be possible is critical to exploring and expanding operational boundaries in developing leading-edge products and processes. In this way, modeling and simulation can be used to drive new solutions rather than to merely verify existing ones. ANSYS calls this process Simulation Driven Product Development(tm).
